

COMPELLENT: EASIEST TO MANAGE SAN

Recent independent research found Compellent's SAN substantially easier to use and manage than traditional enterprise storage products including EMC, HDS, HP, IBM and others. According to the analyst report, 95 percent of Compellent customers classified both day-to-day and advanced storage management tasks as "Easy." What does "Easy" really mean? For Compellent customers, it means managing more storage in less time, and the ability to accomplish even advanced storage tasks in less than 10 minutes.

Analyst Report Confirms Compellent Customers Can:

Spend Less Time Managing a SAN

98 percent of Compellent customers spend less than 3 hours per week managing their SAN, with nearly half spending less than one hour per week.

Confidently Manage More Storage

The majority of Compellent customers reported the ability to comfortably manage over 50 TB per administrator, compared to only 10 percent of customers using other systems.

Accomplish Day-to-Day Tasks Faster

Compellent customers reported the ability to complete a series of common storage tasks three to five times faster than customers using other systems.

Perform Advanced Tasks In 10 Minutes or Less

Remote replication, storage provisioning, data migration, snapshots – all take less than 10 minutes for the vast majority of Compellent customers.

What Can Compellent Do In Less Than 10 Minutes?

Implement a Single-Step ILM Solution

Compellent is the industry's only SAN with Automated Tiered Storage – a solution that automatically classifies and migrates data to the optimum tier of storage.

Create and Map a New Volume of Any Size

Thin Provisioning and unlimited capacity expansion allow you to eliminate wasted storage space and create volumes or expand capacity in less than 1 minute.

Recover Any Size Volume to Any Server

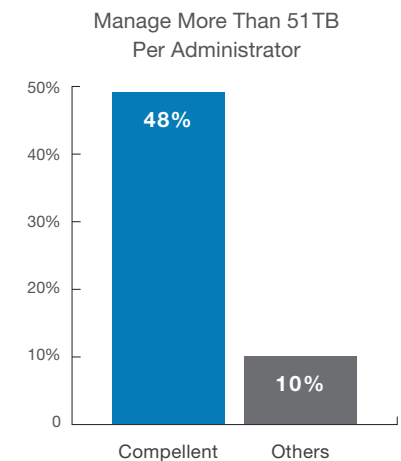

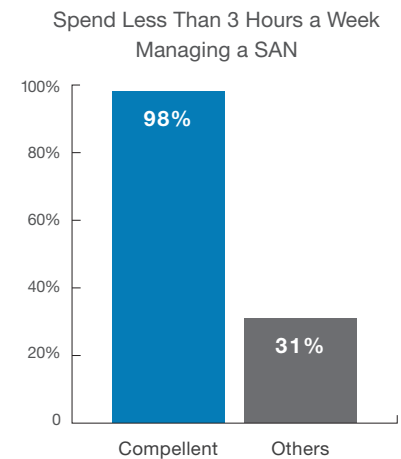

Create an unlimited number of space-efficient snapshots that enable recovery to any point in time in less than 10 seconds.

Setup Remote Replication In As Few As 6 Clicks

Cut bandwidth and storage management requirements in half for affordable multi-site replication.
