

COMPELLENT TO GIVE FIRST PUBLIC UK DEMO OF AUTOMATED TIERED STORAGE AT STORAGE EXPO UK

London, UK – October 1, 2007 – Compellent will be giving the first public UK demonstration of its storage area network (SAN) with Data Progression software, the only product on the market today that delivers fully automated tiered storage at the block-level at Storage Expo UK, Olympia, London (Booth 555, October 17-18).

According to a recent analyst report by Enterprise Strategy Group (ESG), Compellent's Data Progression software has the unique ability to identify inactive data at the block level and move it to a lower cost tier.

Tony Asaro, senior analyst at ESG said: "Data Progression is the most granular level of data movement that we are aware of. It is transparent to users and applications and ensures that only your most active data is being stored on Tier One (your most expensive) storage. This type of intelligent tiering lowers capital costs and makes your storage system far more efficient."

Andy Hardy, managing director of international sales at Compellent, added: "Compellent's Data Progression cuts administrative time and reduces overall storage costs by dynamically classifying and moving data between tiers of storage based on frequency of access. Because the process is now automated, customers can avoid time consuming data classification and the repetitive manual transfer of data between tiers."

To request a private, one-to-one demonstration please contact: [insert number/email]

About Compellent

Compellent is a leading provider of enterprise-class network storage solutions that are highly scalable, feature-rich and designed to be easy to use and cost effective.
